

Live with Jeff O'Donnell: Midterm Elections Not Over Yet and the Fraud is Awakening Everyone

Mike Lindell's IT team shows data that indicates Mastriano and Oz had more votes than their competitors.

By Conservative Daily Podcast, 09 November, 2022

33:47 Gold standard for voting-Florida Governor DeSantis banded mass mail in ballots, voter harvesting. Instituted the use of voter ID, election police force, and ejected the DOJ and told them that you are not coming into our polling stations. The result 1.6 M more votes and prosecuted over 130 people.

36:00 Fetterman and Oz chart

36:00 Guam got rid of the mail in ballot portion of the vote because citizens rose up and protested that they did not feel the election would be legitimate. If we do not get rid of this organized crime that is stealing elections with mail in ballots and the machines, we become intuitional slaves.

37:30 we got blessed with machine malfunctions and irregularities yesterday (November 8, 2022 mid term elections) across the country.

38:12 Doug Mastriano They had him losing by 10% when he won by 6%.

38:39 Pa audits to contest the 2022 elections.

39:43 In Pa they turned in their electors with more votes than voters. A law in Pa says that you can't do that.

39:55 The same thing happened to Doug Mastriano and Dr Oz.

42:29 The Michigan dump that occurred at 1:30AM

42:37-47 Chart showing this Michigan voting ballots dump; Matt DePerno was in the lead before the dump.

43:30 net dump of greater than 156,000 votes

43:55 Matt Deperno was involved with the machines in Antrim county and showed 7,000 votes were flipped out of 15,000 votes

44:15 Irony: after Deperno showed vote flipping in the previous election in A county, the same thing happens to him causing him to lose his election.

44:50 Billions of dollars spent on elections by the candidates only to have the race stolen from one candidate.

44:57 the math behind this is that if people show up and vote at the same time at the same place and vote in the same way every single time, that's impossible. We see these changes in the ads[vertisements] ... when you have the election machines and the vote ballot printers...its impossible to go against them because they can just show up at the ballot counting centers with bigger stacks of ballots.

45:39 In 2020 election, ken Paxton [Texas AG] won 12 of his law suits where they tried to have a couple of month early voting and mail in ballots and he said they can not do that its illegal without the legislature agreeing to pass legislation supporting that. AND because of him doing that although 1 million Texas votes in the 2020 election were stolen from Trump, the second highest in the nation he still won by 5-600,000 votes. They found 2 million votes they could not use because they ran out of votes because they only had two weeks of early voting. So there were not enough fraudulent names, i.e., phantom voters

46:30 similar to what they have in Florida, if you can't pull down enough names to match the algorithms that they have on the [election] machines, it's a good preventative. And that is why we told everyone to vote same day.

46:45 when they made the mistake and put in a dump of 1 M votes and the programmer realized that it was too obvious so he took them off.

47:10 and you can see the naturalized pattern and then when they inject 1000 votes on one side and 1000 votes on the other side.

47:38 How do you explain this 1 M vote injection? Some will say that they made a mistake and it took them over an hour to realize they made a mistake

48:06 if this is a mistake, if the system allows such a mistake, it is unusable. These election machines should not be allowed to be used.

48:40 the databases that hold our voter rolls and these election voting machines are both broken. They call races based on this information. Critics will say that these vote dumps are not the official numbers. Response: they call races {as finished } based on these numbers

49:06

49:59 machines during this election would not take paper ballots. Whether it was a malfunction or a crime, why would you use these defective machines?

50:14 what if the 1 M dump [describe above] was a computer error, and it corrected itself; when you take one zero off a computer that can change a whole election.

50:28 just ask that nice lady in Georgia that got zero votes in her own precinct and crooked Brad called it a programming error.

50:40 and how about the other lady in Georgia that got 4700 votes and she was not on the ballot. She was not a write in candidate. She was running and dropped out 2 months prior.

51:00 so now the only way her name could be on that ballot is that they were planning to pull votes from a person they did not want to win and they gave her that guy's votes.

51:10 the [programmer] got caught. It was not an error. But crooked Brad [Rasenberger] comes in and says it was a programming error.

51:35 if you can make a programming error like this, would you use these election machines...a small error could have the wrong candidate win an election.

52:05 Jeff O'Donnell, [It expert], if this kind of programming was used in our power sector, we would be investing in using candles. Imagine this sort of mistake in a bank. It overwhelms me that people just look the other way.

52:38 We have been building this program that allows us to look at ballot architecture based on Dominion and everyone else. behind this little section, I can make the outcome look like whatever I want by one line of code.

53:00 You can design a malfunction. But the transparency is not there...you can change the ballots behind a non-transparent wall within the electronic voting machines without touching the ballots.

53:30 it took us 3.5 weeks [to build this architecture] and it does not break.

54:20 Long segment where Joe Altman says that we can build an architecture that will be able to monitor the electronic voting machines made by the different manufacturers and be able to see that (editorial interpretation): [vote for candidate A went into the machine but that vote for A came out of the machine as being counted for candidate B].

55:38 Lauren Bobert's campaign (editorial paraphrasing): her district was changed to give her about a 12 point advantage, she is losing to a guy that had an affair in a storage locker,

56:25 you have 40-50,000 ballots that are made up. And you probably have 15,000 ballots of your own that are not real either.

56:40 Jeff, tell us the probability of this even happening. Jeff's answer: it's a meteor hitting the earth probability...I think she will pull this out but it should never have come to this.

57:14 If anyone is looking for a reason to believe that we have got problems, this is one of the poster children for that.

57:27 you can see the output functions: lets give her 50,000 and lets give him 60,000. the reason it has to report at the same interval is because the system can not remember the previous interval reported which is why they use a sequel database next the program's that is actually running the system.

58:14 Joe Altman and Jeff O'Donnell are credentialled IT experts.

58:30 at midnight Bobert is losing and multiple articles are published at the same time saying Bobert is going to lose her seat. Almost like they knew what was happening.

58:57 How do you get to 50-50 vote in a place that is 80% Republican? And her opponent is known as a demon in the area. No one likes this guy.

59:10 I cant wait to see the caste vote record to go along with this. Because they cant hide this it will be legendary.

59:34 Democrats vote more mail in and republicans more on election day. The counties did the mail ins first and ran out of mail ins about here [pointing to a location on the chart of the Bobert race. The point where the two lines get very close together. The rest of the dumps were most likely election day. And that is why I am fairly certain that you are going to see Bobert win this {editor: this commentary was recorded before the election was called in favor of bobert}.

1:00:33 I hope that Bobert after she is declared a winner will announce that this was a manipulated race without a doubt because people in her district know....editor interpretation---that she was overwhelming favorite.

1:01:32 In Mesa county Az,voting in Florida shows what happens when you limit the evil of voting in the Democratic party. It went from 10,000 to 1.6M [editor-votes described above]. The first time in decades that Miami Dade county turned Red

Editors comments--The It expert is saying this is evidence of Democrat manipulated voting patterns for many years. because the difference in the election went from 10,000 votes in the previous election to 1.8 M votes this election.

1:02:14 Which is highly Hispanics many of whom are first generation Americans. The black population in Dade county. this is a place he [DeSantis] should have lost big but he won big they are smart people. they need to be told how to get a voter ID.

1:02:20 You will see like in 2020 the Hispanics vote which democrats counted on for years which is why they want the open border policy, with Mexico is coming around to smack them now

1:03:06 In Dade county-large Cuban America population they can see socialism coming

if we keep out conservative ideas and communicate them to these new illegal immigrants we don't have to worry that they will vote for the Democrats 75-25.

1:06:30 Jeff O'Donnell I will show you Pennsylvania (PA). The Shapiro Mastriano Governor's race Shapiro has an 8% lead over Mastriano

1:06:41 Notice that at 8:50AM, votes are taken away from both candidates. It was a small number but of course it should be zero votes taken away. This is the first indication that there are problems here. The first seven updates sent to the media 325

what is buried unless you look for it here it says 3 the first seven updates that were sent from pa and made their way to media 325,585 votes for Shapiro and 49,331 votes for Mastriano. that is 86.8% of the votes for Shapiro in the first 375,000 votes

1:07:30 coincidentally or not, there were deep problems with the first 400,000 mail in ballots that were received from Allegheny county was part of that. So there is your preload. There is your gift that they gave to josh Shapiro. They gave him a head start of 250,000 votes.

1:08:00 This is the senate race between Fetterman and oz. The first 7 updates were 82.9% Fetterman. It also had take away votes which should never happen. The takeaway votes were not reported the same time.

There is a confusing exchange that votes were taken away first from the senate race and then the governors race.

1:09:04 The distance between Fetterman and Shapiro at the beginning of the voting curves on the chart displayed would be the difference at the end of the voting lines on the chart.

1:09:20 Jeff O'Donnell--I cant tell you how disappointed I am that Oz could not concede fast enough.

1:09:34 Altman-I sent a message to Oz that you need to pull your concession. editor--long elliptical conversation---voting lines were flat showing voter suppression and counting of the paper ballots not allowed.

1:10:00 The companies are called Cathedral and Stellar printing companies along with Rumbeck. they can print any number of ballots they want because they bloat the voter rolls and create mail in ballots got usps (United States Post office) in their pocket because its a high union environment and here we are about the outcome of an election that got stolen. They want to act like there is nothing to see here. You don't know what you are talking about.

1:10:20 we have Florida as a model for what happens when you let the process play out and the people are allowed to vote.

1:10:38 This is shocking--the preload of votes for both: 82.9% in the senate and 86.8% in the governors RACE

1:11:00 WHAT WAS THE MARGIN OF VITORY BETWEEN THE TWO. Shapiro vs Mastriano--130,000 votes : 220,000 for Mastriano and 290,000 for Shapiro---editor filling in elliptical sentences---unclear what is being said---so about 90,000 vote difference

1:11:32 Altman---so they preloaded 325,000 votes, so Mastriano won that race.

1:11:49 O'Donnell---absolutely---Altman-Mastriano has not conceded (editor as of Nov 9,2022)
O=Donell--I will do everything possible to help him because it would crack pa wide open. We need honesty and fairness in Pa.

Editor--this is an example of circumstantial evidence supporting stolen elections of the Governorship and senate in the elections described so far and especially in pa according to these two IT experts that is stronger than found in many court cases that are decided by both judges and juries. We would guess if the analysis given in this entire video interview of the IT experts Altman, O'Donnell and Apollo were shown to a Pa jury, and not only to a judge, the jury would either order the election to be redone with the interventions recommended by these IT experts or the result of the election would be reversed.

1:12:15 In order to believe these two graphs of both Pa races, you have to believe that between 30 and 40,000 Pa voters voted for oz and then voted for Shapiro. They voted for a Republican senator and then a Democrat governor. How could this be?

1:13:10 Altmann--I want to know how many ballots only voted in the senate race and only the governors race?

1:13:32 O'Donnell--if you look at the red and blue lines they go up and down approximately the same amount. These are taking votes away from one and giving them to the other.

1:13:42 This is basic math. This cant happen. This cant happen all over the country at the same rate. It is not how things work.

1:14:00 Apollo if you look at that 1 M ballot voter dump in ?Illinois if you took out that dump it tracks it tracks the exact same line

1:14:25 O'Donnell switches to the line chart of the Illinois race and shows if you take out the 1M vote dump the difference between the two opponents tracks the same way which requires votes to be taken from one candidate and given to the other in order for the two lines to track with the same difference between them over time

1:15:24 tammy Duckworth's senate seat had a good challenge from her opponent. Compared to the Pa results, how can we create a voter profile that a voter will vote for Oz and then vote for Shapiro one of the most leftistsif you liked Shapiro you loved Fetterman. It does not pass the smell test.

1:18:31 Altman to O'Donnell---most people do not criticize you because of the expertise that you have.

1:19:00 editors summary of O'Donnell---everything that we have been doing over the past two years makes it harder for the democrats to keep doing again the vote switching and insertion tactics that they used in the 2020 election.

1:20:43 we took months after the 2020 election to figure out how the democrats stole that election. here we are one day after the nov 2022 election and we are able to already after one day show you how

the democrats stole the 22 election. There is very little to surprise in what we see. So thank you to everybody.

Editor comments---this analysis if presented to a jury that could review the evidence presented in an unbiased manner would vote to support these IT experts testimony.

1:21:08 I want to play a clip from Steve Bannon You can complain about the fight but you must get back in and fight....we don't want to be like David pearl waiting to have his head cut off.

Joe Altman prays for the safety of Jeff O'Donnell and Mike Lindell's families and teams.
