historical cartoon	00:00:00:00	00:00:07:04	To see the beyond the code below.
historical cartoon	00:00:07:06	00:00:21:14	He said we can't defend the grace of God. So he had to face the life for all time.
historical cartoon	00:00:21:17	00:00:35:01	So he needs to be seen before us.
historical cartoon	00:00:35:04	00:00:42:09	That's.
congressional hearing speaker & Clint Curtis	00:00:42:12	00:01:03:04	Mr. Curtis, would you please state your full name for the record? Name is Clinton Eugene Curtis. And where do you reside? Tallahassee, Florida. And what is your profession? I'm a computer programmer. Would you please speak into the microphone so the audience can hear your testimony? I'm a computer programmer. Mr. Curtis, are there programs that can be used to secretly fix elections?
congressional hearing speaker & Clint Curtis	00:01:03:11	00:01:26:23	Yes. How do you know that's to be the case? Because in October of 2000, I wrote a prototype for president, Congressman Tom Feeney at the company I worked for in Florida that did just that. And when you say you did just that, it would rig an election. It would flip the vote 5149 if whoever you wanted to go to and whichever race you wanted to win.
congressional hearing speaker & Clint Curtis	00:01:26:25	00:01:50:26	And with that program that you designed for something that elections officials that might be a county board of elections could detect. They never see it. Mr.. Again, would you answer that question once again? They would never see it. So how would such and such a program, a secret program that, fixes the election? How could it be detected.
congressional hearing speaker & Clint Curtis	00:01:50:28	00:02:15:12	You would have to view it either in the source code, or you have to have a receipt and then count the hard paper against the actual photo. Other than that, you won't see it. All right, Mr. Curtis. If you had been asked you or others with your professional expertise have been asked to design a protected program to that would protect the Ohio elections from against such software.
congressional hearing speaker &	00:02:15:14	00:02:41:12	To fix the election. Could you have done so? If we've been asked to make a program that could fix the election, I'm sure anybody can do it. No. Could you design a program or a procedure or a protocol that would have protected Ohio against this kind of rigging? No. You have

Clint Curtis			to look at the source code. You have to get probably programmers from both or all parties to look at the source code and determine if there's anything in there that shouldn't be there.
congressi onal hearing speaker & Clint Curtis	00:02:41 :15	00:03:05 :06	I mean, it's a simple program. You're adding one to a person's total. It's 100 lines of code officers. All right. You have to let me. Are you aware of whether there was any protective action in Ohio against this kind of vote rigging through software? I don't know. You don't know? I don't know. You were you were not asked to assist in the development of any protective system.
congressi onal hearing speaker & Clint Curtis	00:03:05 :11	00:03:39 :22	Correct? No, I was not in Europe. Have you reviewed at all the election results in Ohio? No I haven't. Okay. Given the availability of such vote rigging software and the testimony that has been given under oath of substantial statistical anomalies and gross differences between exit polling data and the actual tabulated results, do you have an opinion whether or not Ohio election, the Ohio election, presidential election was hacked?
congressi onal hearing speaker & Clint Curtis	00:03:39 :24	00:04:02 :15	Yes, I would say it was. I mean, if you're if you have ever polling data that is significantly off from the vote, then it's probably at. And your testimony is under oath. Yes, sir. And the testimony you've given us. True? Yes. Thank you.
Attorney Bob Rust	00:04:02 :17	00:04:52 :16	Welcome, to those who are listening to this, podcast. You have just seen a video of, our guest making, giving testimony before the US Congress. And, that will be we put in front because we wanted you to see it. Well, prior to this actual interview, it's my pleasure at this morning, and I represent a group called the US, a citizens network group here in the Lehigh Valley of Pennsylvania dedicated to trying to provide to the public opportunities to hear from people of real importance who have got, some significant things to say in various areas that ranges from medical independence, physicians to election integrity, which is the issue
Attorney Bob Rust	00:04:52 :16	00:05:24 :11	that we're going to be discussing this morning to give the people the opportunity to hear that, that the mainstream media is not allowing access to these folks. So it's within that context this morning that I and Joe Vichot, who is, with us, he is the chairman of the Lehigh County Republican Committee. He's vitally interested in ways to assure that the upcoming election is a clean one.
Attorney Bob Rust	00:05:24 :13	00:05:56 :15	Therefore, he wants very much to hear what our guest has to say. And he will be participating in in this interview as well. And is it within that context that, I welcome our guest, a gentleman of, of considerable

reputation who's making a major difference. His name is Clyde Curtis. I'm going to ask you, Clint, if you would please take a moment to tell the people listening a little bit about you and your organization.

Attorney

Clint 00:05:56 00:05:59
Curtis :18 :18

Okay, well, I don't have an organization. It's kind of just me.

Attorney 00:05:59 00:06:03
Bob Rust :21 :03

Okay. All right.

Attorney

Clint 00:06:03 00:06:31
Curtis :06 :03

You know, I talk to a lot of organizations, but I'm not really part of them, okay? Or if I was a programmer way back in. Well, we met took place in 2000. Since then, I'm an attorney, so I do the attorney dance instead, but basically that I'd been for 20 plus years trying to tell people that they should not be using these electronic machines because they simply can't trust them and they're not allowed to look at them.

Attorney

Clint 00:06:31 00:07:06
Curtis :05 :27

And everything that's occurring occurs behind closed doors. And while that doesn't have to be bad, if you think about it, it's eventually going to be bad because people are going to take advantage of whatever they can as most people elections do. So I wrote a prototype for the electronic voting machines back in 2000. And at that time, the prototype, the request was put in that there was a algorithm inserted that would allow the person who knew how to flip it, you know, the buttons to push on the screen because it was touchscreens coming on at that point.

Attorney

Clint 00:07:07 00:07:23
Curtis :00 :07

You can do the same thing with any computer, any tabulator, anything. Just whatever you say. You know how to trigger it and suddenly, boom, it's gonna basically elect whoever you want to elect and flip the logs and flip the ballots and flip everything behind it.

Attorney 00:07:23 00:07:28
Bob Rust :09 :28

But let me stop you. That's certain. Restate what you just said. That's pretty powerful.

Attorney

Clint 00:07:29 00:07:51
Curtis :01 :25

It allows you to flip anything behind it. So basically what happens is that if it's a computer program, the programmer controls it. I am the god of this universe. So unless you can get something away from that, that can check it, you have no hope of beating the programmer because he won't know what you're looking for. So can you.

Attorney

Clint 00:07:51 00:08:16
Curtis :28 :04

When people say, oh, you can look at the logs there are really no logs on computers. There's only what the programmer puts in for a log. You can write those logs. Nothing is automatic. If I don't write it, it didn't exist. If I do write it and I want to change it, I change it. If I make

a ballot image and I want a different ballot image, I'm the one making the ballot image.

Attorney
 Clint 00:08:16 00:08:32 I can make it look like anything I want it to make, and I can tag images
 Curtis :04 :29 with them. My ballot images to say, well, that's how I want to vote this
 guy. Vote a different way. I'll just always choose them, do it the way I
 want to, and put that ballot image on top. So there's no way to really
 beat it.

Attorney
 Clint 00:08:33 00:08:38
 Curtis :02 :19 It's impossible. You just have to get the vote away from the computer.

Attorney 00:08:38 00:08:59 That's powerful stuff. And I want to get into it a little bit further. But
 Bob Rust :21 :10 first, again, a little bit more about you, because I want to make sure
 the audience understands what you say. You're an attorney, but you
 also where did you start it? I understand that you've got quite a,
 knowledge experience in the whole technology area.

Attorney 00:08:59 00:09:01
 Bob Rust :11 :14 Can you just talk about that a little bit?

Attorney
 Clint 00:09:01 00:09:22 Programmer. I work for NASA, D.O.T., all of the big companies, Exxon
 Curtis :17 :23 Mobil Reiter ?word?, basically, if there was something that you could
 dream, I could make it happen. Wasn't a problem, right? Anything
 that you can think of, I can make it happen within the programing
 sphere. So that's essentially what it was. I was basically a prototype.

Attorney
 Clint 00:09:22 00:09:37 Or I would make the initial screen and think of all the things that how
 Curtis :24 :01 to make it work on. Then someone could come up behind and turn it
 into a c-plus or something like that program, you know, the more
 trendy ?word? things, but all the inventive parts would already be
 done.

Attorney 00:09:37 00:09:43 So you mentioned some pretty big names. Just a quick example of
 Bob Rust :03 :26 the reality. What kind of thing would you do?

Attorney
 Clint 00:09:43 00:10:11 DOT I ?word? wrote the electronic document management system
 Curtis :28 :05 for the entire state of Florida. And essentially, basically what that
 does are every document that D.O.T. has, they can scan in and then
 they can call up things that are normal now it wasn't normal then and
 this was cutting edge stuff, you know, 20 years ago. And we also did
 all the conversion so that anything that they already had images, we
 could convert them.

start 9:37
 10/16/24

Attorney Clint Curtis	00:10:11 :05	00:10:19 :21	So we did the turnpike project, took all the images that they had just scattered around, ?stove pike things ?word? those type things, and brought them all into a single system.
Attorney Bob Rust	00:10:19 :23	00:10:49 :10	But just as a quick aside, Joe, besides being the chairman of our local committee, is, veteran a U.S. Air Force pilot. So he's interested obviously in D.O.T. subjects, and he's currently flying all over the world for United Airlines. That's just a quick aside. Okay. Clint, with this video we hope to use, we will use here locally.
Attorney Bob Rust	00:10:49 :10	00:11:13 :05	Obviously, Joe will use it within the Republican, committee and beyond to whatever in his discretion. And we hope it's going to be helpful to you as well. So within that context, let me first start by asking what is the most or what are the most important things you hope for? Well, let me let me back up.
Attorney Bob Rust	00:11:13 :07	00:11:46 :03	I want to make sure that everybody listening to this recognizes that we're aiming at every U.S. citizen. we don't care what the party affiliation is. Republican, independent, constitutional Democrat, you name it. And one of the things that I've learned in is that if there's criticisms out there within, other parties about the speaker that we're interviewing, I want him to have a chance to speak to that, and to recognize up front that.
Attorney Bob Rust	00:11:46 :03	00:12:06 :07	Yeah, that's out there. But don't let that I'm not saying this to the audience now. Taint what you're thinking about. This gentleman, what he's about ready to say clint Can you speak to some of the criticisms that you have been receiving in terms of the whether you indeed did what you just told us?
Attorney Clint Curtis	00:12:06 :09	00:12:31 :08	In general, I don't get criticism. I get ignored because I'm a Democrat. So now that I'm working with Republicans, it's because that they're interested in elections and suddenly the Democrats are saying, oh, everything's great. But they don't use to, from 2000 to 2020, we were the party that was going, we need to fix this. And the Republicans were going, nah, everything's fine.
Attorney Clint Curtis	00:12:31 :10	00:12:53 :26	Suddenly they start looking at the problem and go, wait, now things are good. And in 2020, all the problems that have been going on for 20 years before they actually fell in the Trump election, and they're looking at the data and going, wait, that's crazy. Look every well, in that last hour was for the other side, every vote.
Attorney Clint Curtis	00:12:53 :29	00:13:12 :06	That's impossible. People were dropping ballots off and they live in the, you know, lower part of Texas, but they're dropped. They go on a mile and or an hour and a half to drive to drop these ballots off in a

drop box. And that's gone. This isn't right. And they can't check any thing So finally, you know, they're starting to come that way.

Attorney
Clint Curtis 00:13:12 00:13:33 :06 :20 But I really don't get criticized, I get ignored. So well, most of the Republicans get criticized by the Democrats. They just ignore me because I took the polygraph. I've been saying the same thing for 20 years. Anyone who knows anything thing about computers knows you can make that thing whatever you want it to do. You have the code, you have a back door.

Attorney
Clint Curtis 00:13:33 00:13:39 :23 :25 If you come in with a hacking program from the side, you can make it do whatever you want it to do.

Attorney
Bob Rust 00:13:39 00:14:10 :27 :02 This is really powerful. Clint. But thank you for that. Interesting. You say you're getting ignored and the fact that you're a Democrat, which, again, adds credence to this, that what we hope is a, is understood to be aimed at everyone, no matter what your party affiliation may be. So clint me, Joe, everyone listening. What's the one thing or more that you want to make sure they take away from the session?

Attorney
Bob Rust 00:14:10 00:14:14 :02 :27 Is that what you just said? And if it is, what do we do about it?

Attorney
Clint Curtis 00:14:14 00:14:40 :29 :09 Well, it is that you can't use these computers to do your elections. You can't let the elections be controlled by politicians or governments behind closed doors. Basically, you end up with the same system that Russia has. People get to vote in Russia. They just don't get to see the count. And we're in exactly the same place. They now give you the elaborate dog and pony show, but essentially you don't get to see anything.

Attorney
Clint Curtis 00:14:40 00:15:06 :11 :26 And if you look too close, they chase you away. And now if you complain, they try and put you in jail. Or if you try and investigate anything. So it's getting worse, not better. So my goal is to get rid of it. Back in 2004, other countries took notice of what we were saying and actually addressed it. Yeah, I don't (Bob and Clint talk at same time clint ?words? [you have to get rid of the machines.

Attorney
Bob Rust 00:15:06 00:15:10 :28 :10 As I understand in Europe they use paper ballots.

Attorney
Clint Curtis 00:15:10 00:15:13 :12 :08 ? Words they use paper ballots count them by hand, and then they.

and they do it at the precinct level. And it could be done that evening. And with the results. Joe's. It's obviously got, Joe's interested in what's happening here in Pennsylvania. And can you speak to what you, you know, are I feel comfortable speaking to as relates to the election here, 2020, 2022. Your thoughts, about that.

Attorney 00:15:13 00:15:40
Bob Rust :10 :17

Attorney 00:15:40 00:15:44
Bob Rust :17 :27 And then I'll turn it over to Joe, that ballot.

Attorney
Clint 00:15:44 00:15:47
Curtis :27 :13 Do you use hand ballots at all? Handwritten ballots.

00:15:47 00:15:50
Joe Vichot :13 :25 We do. In Lehigh County, it's all handwritten ballots.

Attorney
Clint 00:15:50 00:15:53
Curtis :25 :05 Yes, but then you stick it on a machine.

Joe
Vichot/Clint 00:15:53 00:16:01
nt Curtis :05 :13 And we scan it. Yes. Clint-What happens Joe-it says it? Clint-?words machine. You don't know

Attorney
Clint 00:16:01 00:16:16
Curtis :13 :24 It goes into the machine. And whoever is the programmer is does whatever he wants to. Because you have no control over what ?words he does, what? It's just a shell. It's kind of like, do you ever go to those accuracy tests.

00:16:16 00:16:18
Joe Vichot :27 :26 Right? Yes. We do.

Attorney
Clint 00:16:18 00:16:43
Curtis :29 :19 Do you know they are garbage? Joe-Probably clint- the programmers know what's going on? Look at the case [of] Volkswagen VW had out a diesel. I think it was a ?word? wreck??? had out. 11 million of them. They got tested every year by the EPA. Right. But especially in states like California and other states that do the actual tests passed the flying colors.

Attorney
Clint 00:16:43 00:17:06
Curtis :19 :13 It was amazing because it got great mileage and it passed all the test. No other diesel people could do that until some college kids tested it off of the machines. Just took it for a drive with a pipe on the back of it, and found out it had five times the emissions that were actually being recorded because it knew what was being tested by the patterning was being driven, and by what was hooked up.

Attorney Clint Curtis	00:17:06 :18	00:17:27 :15	And so it made the ?words? ____ differently. The same thing happens in machines you cannot ?word? ____ someone just got up recently. Another car company did the same thing and also got caught eventually. But you know, it's not before 11 million people, but they're actually able to check we were never able to check what happened to that machine in Pennsylvania.
Attorney Clint Curtis	00:17:27 :18	00:17:37 :25	Never. You can't see the source code. You can't see the ballots. You're just out of luck. So you just have to trust them. Why? But the.
Attorney Bob Rust	00:17:37 :28	00:17:44 :22	So Joe know, what would you ask of, of clint?
Joe Vichot	00:17:44 :25	00:18:07 :20	Yeah. And of course, we're going to continue to deal with everything we can deal with within the confines that we're dealing with. Right. With this election code and our counties. One of them is like you mentioned, L&A testing. They tested that week. And we got that set up on oct 18 here. And I got a team, actually, unfortunately, they only have one representative and they're.
Attorney Bob Rust	00:18:07 :20	00:18:15 :11	Joe excuse me Excuse me. You're not coming across. So you're speaking directly to the microphone. Yeah okay. Go ahead. Correct.
Joe Vichot	00:18:15 :13	00:18:56 :21	Okay. All right. Clint, you can hear me. Okay. Okay. And, so and the way the law is written, we can only have one person in there, at a time. And it's ridiculous because they have 158 machines and they have more than one person, you know, checking those machines. But like you said, at the end of the day, that program that they showing us that they say, well, see, we put 33 ballots in and all different directions of it, all different, you know, filled out differently and, and sure enough, what we put in there, what came out is exactly the same.
Joe Vichot	00:18:56 :23	00:19:19 :19	Okay. Great. So that program at that time did exactly what you wanted it to do. But what we learned from Garland, Favorito, though I believe his last name is on the last podcast was. Well, but any program, you can actually set it up based on date and time, to start, that, you know, so even though we locked down the computer, they, machines.
Joe Vichot	00:19:19 :21	00:19:41 :10	once that L^A testing? That's, there's really no guarantee that that there is not an another program in there that could, you know, give us different results. And whether they and the election clerk was doing that, he could be completely unaware of any of that, too. It's well above his pay grade. He's just doing what he's told to do.

Joe Vichot 00:19:41 :12 00:20:03 :10 Right? So. So anyway, so we're we still had to do that. So when it comes down to the end of the day, is, there needs to be a hand count, but just to let you know, yesterday I actually had an interview with the French consulate, came to Lehigh County. He wanted to know about what's going on. So we're talking and like you just mentioned in France, there is our electronic machines.

Joe Vichot 00:20:03 :10 00:20:25 :28 It's all done by hand. And, you know, I mean, that's no small country. It's definitely bigger than Pennsylvania. And why can France do it by hand? But the state of Pennsylvania cannot. So anybody who criticizes what you say or anybody says on this, let's go to Europe and you'll get, you know and they will back us up on this.

Joe Vichot 00:20:25 :28 00:20:45 :13 So yeah, we're in a very difficult spot. So the one where I want to ask you about is the only thing I can see that can help us right now is it's after the election, unfortunately. And that's what the auditing when we do a 2% audit here, it's only, you know, in Lehigh County, it's only 2000 votes.

Joe Vichot 00:20:45 :15 00:21:14 :10 And I'm fighting with them to get them to do it as a hand-count. So my question to you is the same as, Garland is in the law. It says it must either be manual, mechanical or electronic. And if it's electronics, it has to be on a different, electronic machine. Now, according to the our secretary state, my, our machines require it says if it use the machines that we're using the DSR 200 and 450 two hundreds and the four 50s.

Joe Vichot 00:21:14 :12 00:21:26 :05 You have to do a manual audit. Okay. So my definition as my question to you is what do you consider a manual audit? What is that? What is the definition of a manual audit.

Attorney Clint Curtis 00:21:26 :07 00:21:50 :08 The only manual audit you will catch a programmer with is if you count every ballot that it was set because otherwise we can play games. We will be able to anticipate what your random is because there is no real random in the world. Everything pattern. And so we can anticipate especially 2%. 2% is easy. You know you give me 10% gets a little more difficult.

Attorney Clint Curtis 00:21:50 :11 00:22:06 :21 But the problem with auditors, even when they catch something, they don't catch anything. They had an audit that caught a race down in Georgia, where this lady ended up at the end of her at the end of the ?word?, but she had no votes in her own precinct

Joe Vichot 00:22:06 :24 00:22:07 :08 Right

<p>Attorney Clint Curtis</p>	<p>00:22:07 :11</p> <p>00:22:34 :17</p>	<p>That. She voted for herself and she ?worda? thought her husband voted for her ?words? went for it ?words?. He at least didn't deny it. ?words? but we make a full audit where they count every ballot they found she actually won. Actually, one. So obviously the audit caught something. Yeah. Did they check another race? No, they fix the race that they caught and said, oh we'll get it next time.</p>
<p>Attorney Clint Curtis</p>	<p>00:22:34 :19</p> <p>00:22:54 :09</p>	<p>Just look the other way. Don't look at the guy behind the curtain. We got it. Must be some sort error we'll fix it. So literally they caught nothing. You know, words phrase???what if she and said I don't look for myself, you know. And that happens every time. Every time you see an issue, you go here. It's human error.</p>
<p>Attorney Clint Curtis</p>	<p>00:22:54 :09</p> <p>00:23:00 :29</p>	<p>It's this error is better. But they never looked beyond that error. They don't go, well, let's check other....things</p>
<p>Joe Vichot</p>	<p>00:23:01 :01</p> <p>00:23:23 :00</p>	<p>And my point. But, when they say manual on the war, I mean, obviously, Mike and I hope you agree with me that that means hand-count. I mean, yeah, because what I'm being told was, oh, no, that just means you can manually feed it into another electronic machine. I have to say. Are you kidding me? It's still electronic.</p>
<p>Joe Vichot</p>	<p>00:23:23 :03</p> <p>00:23:30 :08</p>	<p>That's right. It is still being counted by a program, not by another source. It could be a human source.</p>
<p>Attorney Clint Curtis</p>	<p>00:23:30 :10</p> <p>00:23:52 :09</p>	<p>We're legal to hand count the ballots. You have to basically just re-feed it in and take the exact same thing that came up the last time. Waste of time and the why? They're not even trying to deal with the ballots. They're trying to get rid of the ballots altogether and just count the ballot images, which is the image that is produced by the program that's counting the ballots.</p>
<p>Attorney Clint Curtis</p>	<p>00:23:52 :11</p> <p>00:24:21 :01</p>	<p>if That's off, you got a bad programmer because he should make that match regardless of whether it's right or and the way the laws are set up, they are set up not to actually catch anything. They're set up for finality. You know, it's kind of like they're trying to change the rules on, certifying elections. Now, certifying elections is all just sort of a performance rather than duty to actually inspect that, that.</p>
<p>Attorney Clint Curtis</p>	<p>00:24:21 :03</p> <p>00:24:49 :12</p>	<p>So I think January 6th, I don't, you know, January 6th, a real funny topic for Democrats. But, you know, they were pushing not to have pence certify the election right. But he thinks he had to. Well, then why have the performance if there is no oversight, why have the performance? And the problem with certifying is it now takes away everything you can do to investigate what happened.</p>

Attorney Clint Curtis	00:24:49 :15	00:25:08 :06	Because once a year, like nothing else now, I don't care if it's long, what's done. And that is the big push to not certify because they had all these investigations going right. They got lawsuits out there. They were trying to get the source code, which even in a presidential race, they never got the source code, not once.
Attorney Bob Rust/clint	00:25:08 :09	00:25:12 :19	Say that again clint. So that again, clint-presidential race.
Attorney Clint Curtis	00:25:12 :22	00:25:24 :24	They never were able to get the source code to these machines. And the few people tried to get it behind the scenes, like Tina Peters and some other people, they got charged with crimes.
Attorney Bob Rust	00:25:24 :27	00:25:26 :08	Goodness gracious.
Attorney Clint Curtis	00:25:26 :11	00:25:46 :18	Trying to look and see if the machine was accurate. Now, honestly, they were a little over their heads. I think technically, because just getting the source code without actually blueprinting the machines doesn't tell you anything, because a lot of times your code that can have can be anywhere. It can be on the hardware, it can mean the software, it can be in the firmware, it can be anywhere.
Attorney Clint Curtis	00:25:46 :18	00:25:57 :28	So if you only have this program and you don't have everything else that's touching it, you really don't have anything. So, well, that's a tough ?word?:_clip.
Attorney Bob Rust	00:25:57 :29	00:26:21 :21	I've heard a lot about Joe's already done to try to track things down, but am I hearing you correctly, like the, that your solution to this is getting rid of the machines and going to Hand-Count and then what are you proposing? What did you propose? Well, we saw the video. I mean, we know about your background and what you did, but speak a little bit further to that.
Attorney Bob Rust	00:26:21 :21	00:26:24 :03	What you told Congress.
Attorney Clint Curtis	00:26:24 :05	00:26:34 :04	Well, I told Congress they couldn't trust the machine. They would have to go through the source code. They'd have to go through everything to find it all out. I didn't go too much in-depth with them because they're congressmen, so they will not understand.
Attorney Bob Rust	00:26:34 :06	00:26:35 :01	Right?

Attorney Clint Curtis	00:26:35 :03	00:26:52 :01	They're not programmers. They're not computer scientists. They're a guy who got elected, you know nothing about dogs and driveways, so they're not going to understand. But if they would ever have gone in that direction and they were toying at it, you know, there were people that work had some things out there. But, we had a pretty good.
Attorney Clint Curtis	00:26:52 :07	00:26:54 :26	Who was out there, do you know Rus alder??/spell? Russ Holt--- perhaps
Attorney Bob Rust	00:26:54 :28	00:26:56 :04	I don't.
Attorney Clint Curtis	00:26:56 :06	00:27:20 :29	Democrat. I think he was out of Michigan, Minnesota. Okay. Yeah. Had a heading in that direction. We talked with him ?words---- Delt with him ---?word?--- at the language ??---and then a bunch of the lobbyists came from Microsoft and all the other companies. They gutted that ??word?[draft of law] about 30 nothing. It was all down to show again. And it didn't pass anyway. But I mean, it was just gutted because they make money if the machines are there
Attorney Clint Curtis	00:27:20 :29	00:27:22 :06	Are there.
Attorney Bob Rust	00:27:22 :08	00:27:35 :12	That's a pretty important point. So you're basically saying attempts at reform are going to be significantly resisted by those folks that make money on it. It makes sense.
Attorney Clint Curtis	00:27:35 :14	00:27:57 :22	But in other countries I didn't have that problem. Like when I talked to France, I talked to Germany, I talked to Netherlands. They actually listen and go, okay, how do we stop that? In 2018, Netherlands called and they had caught the Russians coming in and they got in databases. And the Russians were particularly bad that time. They weren't really good at it.
Attorney Clint Curtis	00:27:57 :25	00:28:16 :12	By bad I mean doing it and getting away with it right? They weren't getting away with it because the country is trying to hack every time. If you have anything out there worth hacking, right, and we do the same thing to them, I'm sure. But so they got to the Netherlands and when they called it was six months before their election.
Attorney Clint Curtis	00:28:16 :12	00:28:40 :13	For six months you went electronically and they talked to me and said, how do we fix this? How do we keep these Russians out of the election? I said, well, I'm a smart Alec. So I said, take them. Seems really tight. Cardboard box, you know, lay down on the side,

cardboard box really tight. But I said, put the tape on it, you know, really snug tape on it looks like.

Attorney
Clint
Curtis

00:28:40
:15

00:29:01
:03

And you throw on the ocean because you are not keeping them out of a family. And the one you could catch it is the one we don't have to worry about. It's the 27 other guys, little also in there that you cannot copy out and send to the networks. And they did it in six months they threw them out and count the whole thing by hand.

Attorney
Clint
Curtis

00:29:01
:03

00:29:27
:21

Now we got a process. We can build a handout usa.com. It was a process we show we did it in Dallas and every county can hand-count ?word? elections and whether it be done properly and in two hours. And we would have an accurate count up by a minute, you know.

Attorney
Bob Rust

00:29:27
:23

00:29:30
:23

At the just a second network.

Attorney
Clint
Curtis

00:29:30
:26

00:29:31
:14

It's gone now.

Attorney
Bob Rust

00:29:31
:18

00:29:32
:27

Okay. Good, good.

Attorney
Clint
Curtis

00:29:32
:29

00:29:34
:16

Well not once anyway.

Attorney
Bob Rust

00:29:34
:18

00:29:39
:20

So what you're saying what they're doing and then Dallas and Texas. Go ahead.

Attorney
Clint
Curtis

00:29:39
:23

00:30:00
:21

Anyway. But this is not really what they're doing in Texas, Rust okay Curtis-what they're doing in Texas is terrible. But oh okay. We took them out. We showed that you could hand-count every race on camera with a ?word?_____ you know, live streamed out to everybody. So everybody would know that the count was correct. And everyone would have it.

Attorney
Clint
Curtis

00:30:00
:24

00:30:18
:25

So it would be done. And you could do it all in an hour, maybe two, and everything would be done. So you're not up all night waiting for election results. It's a piece of cake. And, you know, I was talking with the, the governor's chief of staff. I think he was. Anyway, we're talking about I said, you know how many people we need to do that?

Attorney
Clint
Curtis

00:30:18
:28

00:30:40
:23

Well, yes, I do, because the math is pretty easy. There's another little video I sent you where we were in Montana showing this, and they were going through it. And basically you will go through 100 ballots on

a race in two minutes. And 30s, I think it is in which it will be doing a channel. And essentially you just go out with every pair, you know, you go with a pair and a pair up here and it's walk right through them.

Attorney

Clint 00:30:40 00:31:07
Curtis :25 :29

How many people you need is easy to say, you know, but in Germany, where they also count tons of votes, they actually have a system and they get people and the count them and they're not volunteers, people that, oh, people have been a volunteer they're, right? I mean, they will initially, you know, they threw a hand count tomorrow with but we had one hand, that tried to do one in Nevada and we had 400 people sign up in a day.

Attorney

Clint 00:31:08 00:31:24
Curtis :01 :04

So people want to do it, but they will get bored. So they don't do that every time. But in Germany, what you do is you use the same system rules to get jurors, because nobody wants to be a juror either. But you get the jury that way, and then you bring him in to do the election and they get out of the jury duty.

Attorney

Clint 00:31:24 00:31:44
Curtis :04 :10

So in Germany, they try and do the hand-count because they don't want to sit on the jury. So if you're lucky, you get to go give yourself a little public service and we knock it out. And the problem is not that big because you said, you know, Pennsylvania's big, but, you know, France was bigger, essentially. That's not the way you look at it.

Attorney

Clint 00:31:44 00:32:04
Curtis :11 :11

You look at it. How big is a precinct? Because that's where you count. It's so you don't need 25 million people to count that precinct. You need 5 or 6, and you're done. And it's under camera. So they can't cheat because everybody can watch it happen. So if you look at the video, you'll see that. So I've been trying to get that on in Dallas.

Attorney

Clint 00:32:04 00:32:29
Curtis :11 :15

They actually went completely the other way. So now they have a place where you vote on a touchscreen. It then tells you what your vote is in micro print and then puts a barcode, which is what the machine actually reads. So what's the point? Yeah, just let the West make a decision. You're wasting people's time.

Attorney
Bob Rust

00:32:29 00:32:34
:18 :27

What states have made progress in your judgment?

Attorney

Clint 00:32:35 00:32:58
Curtis :00 :21

Georgia was trying for a while. I was talking with the lieutenant governor's people, and he was trying to make a push for it. They're trying to get there. But, the secretary of state is horrible. Raffensperger or whatever famous other Republican field. Horrible. He lives and dies by these machines and won't let them go. So even a court case that he recently lost that said the machines aren't valid.

Attorney			He's gonna use them anyway, but there is no real penalty for them.
Clint	00:32:58	00:33:20	So we need the people to actually say, I want to fix this, you know?
Curtis	:24	:11	And people say, where are we going for this election? Well, I talk with some of Trump's people. I talked with these people. Democrats did not want to know it because they're on the side of, oops, everything's perfect, right?
Attorney			We're trying to explain that to you and ?word? you like the whole philosophy behind it. So basically what you do if you put a camera over it and then at the precinct or wherever you do your first count before anybody else touches it, you just thumb through the ballots on the camera like you can't count them that fast at full speed.
Clint	00:33:20	00:33:38	
Curtis	:14	:09	
Attorney			But you do now have a record that goes in before it goes in the machine. So the machine gives you a total and you sit down. You can actually count the race that you think is wrong by looking at the video in slow motion. And I actually know that that count is right. If you do that, the validity of the count is now restored before it gets in the machine.
Clint	00:33:38	00:34:00	
Curtis	:09	:20	
Attorney			So I don't care what the machine does. I don't care if it's right, because you know what the real right is, but they'll be right at that point.
Clint	00:34:00	00:34:10	
Curtis	:22	:01	
Attorney			Right. But the point that that you could still say, like you just said, take a picture through the machine, still doing a hand count. If we did the hand count, the scanning the machine, fine. But still do the hand count right then and first. If the machine matches, that's just the back of the machine is the back up to the hand.
Joe Vichot	00:34:10	00:34:31	
	:03	:16	
Attorney			The machine should be the opposite.
Clint	00:34:31	00:34:32	
Curtis	:21	:24	
Attorney			Yeah, yeah. Neither.
Joe Vichot	00:34:32	00:34:33	
	:25	:23	
Attorney			if you put it on video. You don't even need the machine because everybody in their dog in America could sit down and check that ballot, could check that vote. They see every ballot and every vote.
Clint	00:34:34	00:34:57	
Curtis	:00	:16	And people who don't think these things are connected. We got a really good thing down in Texas. I think it was 22 congressional 22.
Attorney			I sent you like a PowerPoint of it, as well as the images themselves. And one of the candidates was sitting there basically just recording the video of what was going on, getting screen shots at 8:31 p.m. in eight different counties across two separate vendors ?words?--so
Clint	00:34:57	00:35:34	
Curtis	:19	:01	

about things that are not connected. The Democrat and the independent had exactly the same number of votes, not the same percentage, the exact same number of votes.

power
point
above
Attorney

Clint 00:35:34 00:35:41 You know, if you show it on the screen People can actually see that
Curtis :04 :22 in eight different counties at exactly the same moment in time.

00:35:41 00:35:43
Joe Vichot :25 :20 What?

This was, you know, for a computer programmer that just thinks that what we're doing math, we're doing math in the database putting things together because that's ?words?-that's what mine did , right? We get the votes, we do the math, and we put them where we want to put them. So that's what they were doing. And then after that, of course, it didn't work.

Attorney
Clint 00:35:43 00:36:01
Curtis :22 :25

In fact, the poor independent candidate, you know, where they were playing with this, he sometimes got less votes at the end of the election then during that 8:31PM process where it was just right there in your face, they got caught. Now how can that happen if there is no connection?

Attorney
Clint 00:36:01 00:36:19
Curtis :25 :13

Attorney 00:36:19 00:36:20
Bob Rust :16 :08 Right?

There's a Republican race, an words??--rx5.the Republican. words-- while I vet him He didn't do it. He made ?words?--part of the money, but he didn't do it. And three different counties all exactly said so there is a connectivity of some sort. And I have to admit, don't let ?words?--these people say it's not connected to the internet. You ever heard that, right?

Attorney
Clint 00:36:20 00:36:44
Curtis :10 :23

Yeah. It's not connected. ?words?-to the internet. They don't know enough about computers to be saying anything. They should just go sit down because the internet is just one transport protocol that you use to actually connect your computers ?words?----up with one of them---you can wire them through the house wire.. That's what we did back in 2000. Everything you just you didn't have, you know, the cloud.

Attorney
Clint 00:36:44 00:37:09
Curtis :23 :23

Attorney
Clint 00:37:09 00:37:37 It's not some much words???--wired House like you can do Bluetooth
Curtis :23 :08 from the radio in to a thousand different ways to do it. And so but Texas thing kind of shows there is connection and it's not vendor

specific because it's two separate vendors. So whatever is making the controller has a lot of power over all of those machines.

Then we have some example that Northampton County in the last two elections they have programing error. Again and they didn't do that and they would have caught it in L&A testing if they had done it correctly, but they actually farmed it out...to the same company that makes the machines to do that update. Testing

Joe Vichot 00:37:37 :11 00:38:00 :21

That's the, they were so lazy about it. They messed up with the programing for the, the, the questions of the couple about retention judges. All you had to do is say yes or no, and they had the yes and no, backwards. So and some people will print it out. They have the touch screen like you were talking about.

Joe Vichot 00:38:00 :21 00:38:21 :19

It prints out a little piece of paper saying, you know, this is what you did with a barcode, which can be anything. Right? And most people don't even look at that. But some did, and they go, wait a minute, I didn't say yes here. I said no here and yes here. So that's how they caught it. And it became a mess.

Joe Vichot 00:38:21 :19 00:38:38 :28

It shut down that whole precinct. And so a lot of people didn't get the vote, which was disenfranchising. But they fixed it online. But it's a wait a minute. Yeah. There was no connection, you know. So that's how we know that there is a connection, at least with the machines that use Northampton County. So maybe there. Yep, yep.

Joe Vichot 00:38:38 :28 00:38:58 :18

Attorney
Clint
Curtis 00:38:58 :21 00:38:59 :20 Yeah. Okay.

So let me let me jump in. You said earlier, you said we'd like to hear how the Democrats can say everything is just fine, that you would tell us a little bit about that. I think that'd be helpful because we have to talk to the Democrats. We have to counter the Democrats, too. Okay, let's.

Attorney
Bob Rust 00:38:59 :22 00:39:16 :17

Let's play a game. Okay? Play a little game. It's really easy to do. I'm going to think of a number 1 or 2. You're going to pick it from 50 bucks, by the way. Oh okay. Money the presidential election. But I want to think of that. Why would you trust me? I'm a machine company, right? I'm a machine company.

Attorney
Clint
Curtis 00:39:16 :19 00:39:34 :19

Attorney
Clint
Curtis 00:39:34 :19 00:39:38 :05 So you have to trust me. 1 or 2.

	00:39:38	00:39:40	
Joe Vichot	:07	:15	?words?--should I tell you
Attorney			
Clint	00:39:40	00:39:41	
Curtis	:18	:08	Just pick a number.
Attorney			
Joe Vichot	00:39:41	00:39:41	
	:08	:16	Two.
Attorney			
Clint	00:39:41	00:40:00	...words? you're wrong. You'll make 50 bucks. Let's do a ?words? Bet
Curtis	:19	:00	?words? double or nothing--. But I'm going to write it down. So now you have a paper ballot. Okay. ?words?--. Okay, I wrote it down. So I have paper ballot right here with 1 or 2 double or nothing.
Attorney			
Joe Vichot	00:40:00	00:40:03	
	:02	:06	But you haven't showed us the ballot.
Attorney			
Clint	00:40:03	00:40:04	
Curtis	:08	:27	The 1 or 2 which.
Attorney			
Joe Vichot	00:40:05	00:40:08	
	:01	:19	I will give. Yes. It's going to get expensive. I'll say two.
Attorney			
Clint	00:40:08	00:40:25	?words? You're welcome. I can't show you the paper ballot because it's proprietary. ?words?-the way I dealt it -?words?. Sorry. It had stuff on it you might identify a voter with it so you can't see it tonight.
Curtis	:21	:19	Now you owe me money. Now you owe me a 100 bucks. Okay, now I will show you what the Democrats think. ?words?-- right now
Attorney			
Clint	00:40:25	00:40:31	Yes. Nothing's different. Don't writing it down. You're not going to see
Curtis	:19	:26	it 1 or 2.
Attorney			
Joe Vichot	00:40:31	00:40:34	
	:28	:25	Now you do this one. But I'm running out of money.
Attorney			
Clint			
Curtis & Bob Rust	00:40:35	00:40:44	Rust-One, Curtius-one. You're right there. Now, are you going to say that last one cheated you? Are you going to say it's correct?
	:26	:19	
Attorney			
Bob Rust	00:40:44	00:40:45	
	:22	:16	That's correct.

Attorney			Oh that's correct. Yeah. And that's where they are. Yeah. The winner always gets it right. Well, I'm good with it. I'm good. Rust-Okay. Yeah.
Clint	00:40:45	00:41:09	So there are so they can complain about the elections up to the point where they win. When they win it makes it much more difficult to say.
Curtis	:18	:24	Now wait if the elections are so bad my guy might not have won
Attorney			words?--and that's were the democrats win-----and people don't go there. And that's where the Democrats win and that's the problem.
Clint	00:41:09	00:41:31	And there are a lot of them. They're kind of, you know, just kind of holding their tongue because, you know, when Trump is bad, well,
Curtis	:24	:05	now it must be good, right? Because the other team is bad. Therefore I go with the good, I don't want to judge my own thing.
Attorney			And that's where the Democrats ?words?--went which is a bad thing.
Clint	00:41:31	00:41:43	Now, if the Republicans win this one and it looks like ?words/-they are going to win this one, are the Democrats then going to say, oh no,
Curtis	:09	:28	you elections are bad again?
Joe Vichot	00:41:44	00:41:45	No way.
Attorney			
Clint	00:41:45	00:41:51	
Curtis	:19	:21	And are the Republicans going to say no? The elections are now good.
Attorney	00:41:51	00:41:59	So interesting that you think the Republicans are going to win. That
Bob Rust	:23	:00	that that's, that's something.
Attorney	00:41:59	00:42:00	Listen,
Bob Rust	:03	:08	
Attorney	00:42:00	00:42:02	But sounds go ahead.
Bob Rust	:10	:14	
Attorney			
Clint	00:42:02	00:42:04	Correct. I talked to a lot of Democrats, okay.
Curtis	:16	:22	
Attorney			
Clint	00:42:04	00:42:06	words? You are a Democrat., words?-
Curtis	:25	:07	
Attorney			They don't like Harris, and they say they're going to vote Trump. But
Clint	00:42:06	00:42:15	they would never say that to a pollster. Right. We're not going to say
Curtis	:09	:07	that out loud because that's ?word? Is unclear?

Attorney Bob Rust	00:42:15 :09	00:42:16 :21	That is interesting.
Attorney Clint Curtis	00:42:16 :24	00:42:35 :15	So I think that's why Trump always polls lower than he gets. Because even the Republicans I talk to, you know, a lot of Dems don't want to say they're going to vote for Trump because like all the pushback they get, but, I mean, ?words?-neither are they going to- change their vote and they're not going to tell you about it.
Attorney Clint Curtis	00:42:35 :18	00:42:45 :13	And I think that is the issue. And I don't see a lot of support for Harris. I like Biden, granted he got a little old at, you know, don't we all.
Attorney Bob Rust	00:42:45 :15	00:43:10 :26	words? Well, clint if I'm hearing it correctly, going down the road, as far as Joe and I, as people of Pennsylvania concerned, somehow, some way we need to convince our legislature, both, House and Senate and the governor, to do away with electronic voting machines. That is, it is a long game.
Attorney Bob Rust	00:43:10 :29	00:43:17 :18	It's a process because of people like you. You have been at it since 2020? I mean.
Attorney Clint Curtis	00:43:17 :20	00:43:18 :11	Yeah, she's.
Attorney Bob Rust	00:43:18 :11	00:43:30 :07	Now no, longer than that, you've been at it for over 20 years. And you're making inroads. But by gosh its taking. It looks like it's. We just need to stick with it. Keep at it.
Attorney Clint Curtis	00:43:30 :09	00:43:50 :01	You can win because you will have the power if the Republicans take it, Rust-right, Clint-they suddenly decide that everything is peachy. Then you will have the ability to do that. And that's easy to do. We don't have to reinvent the wheel. We can start to look at these other countries that are already went for it, and we know how to get the volunteers.
Attorney Clint Curtis	00:43:50 :07	00:44:01 :18	Well, be semi volunteers, the drafted volunteers, and we know how to get the count and we know how to put it on film. It's all really simple, but we just have to get people want to do it.
Attorney Bob Rust	00:44:01 :24	00:44:22 :29	And yet that is your underlying point. And the founder of this organization agree with it. It's both. It's not a Democrat its not a problem with Republicans. . Both. of us ?words? everybody's at fault because if we win, we're going to say, hey, everything's okay. What are you talking about? Why do you want to make a change?

<p>Attorney Bob Rust</p>	<p>00:44:23 :02</p>	<p>00:44:47 :26</p>	<p>And so it is a devil if you do devil's if you don't, I'm going to switch on you real quick to go to another question that's outside of Pennsylvania, outside of this country. But you've also, gotten into that. You wrote, The Big Hack. Can you tell us just quickly a little something about that?</p>
<p>Attorney Clint Curtis</p>	<p>00:44:47 :28</p>	<p>00:45:20 :21</p>	<p>That's actually, where, that shows a hack from a hardware perspective. Okay. What happened with the with, computers is that they were all over the place. They were, DOD, CIA, everybody had these particular servers that Amazon wanted to buy. The company. So Amazon looked at the schematics and then looked at the inside of the computers and said, there's an extra thing here.</p>
<p>Attorney Clint Curtis</p>	<p>00:45:20 :23</p>	<p>00:45:42 :16</p>	<p>What's that cost us? And do we have to have it? They weren't looking from security. They were looking from cheap. Right. I am not going to put something in? I don't have to pay for it. So they were bean counters. And so they are investigating and found out that all of these servers that had this little device put in looked like a basically a heat sink, were actually it was a little microcomputer installed by the Chinese.</p>
<p>Attorney Clint Curtis</p>	<p>00:45:42 :16</p>	<p>00:46:09 :18</p>	<p>words?--in all of these words? servers and in our end all the computers and in that little Chinese thing, it actually was a full computer, had its own networking capability. It would run off the CMOs battery when the computer was even turned off, and it would basically allow full control of that computer ?words?---from a programming standpoint to all the way down to any security involved.</p>
<p>Attorney Clint Curtis</p>	<p>00:46:09 :21</p>	<p>00:46:32 :01</p>	<p>And that was back in 2015. Bloomberg actually exposed that. And no one did anything. So to use a machine that could be hacked from companies where we get our supplies overseas, it was just stupid. words?--We put that in. Still stupid. It's not paying attention.</p>
<p>Attorney Bob Rust</p>	<p>00:46:32 :03</p>	<p>00:46:51 :01</p>	<p>words???== pretty terrible stuff. The. One other aspect that I know would be interest to me, and I think it would be to Joe, too, but, what are the legal issues that we, we need to deal with here?</p>
<p>Attorney Clint Curtis</p>	<p>00:46:51 :03</p>	<p>00:47:12 :13</p>	<p>Well, unfortunately, the laws are written by the same people that give you the machines. And so the laws keep you from actually checking anything. And from a legislative standpoint, you could change it if you can get the legislators to do it. But a lot of them are afraid. You know, that if they go against the guy counting the votes, you know what's going to happen to them.</p>

Attorney			You know, they're going to be Kari Lake, like Arizona, like, you know.
Clint	00:47:12	00:47:36	Oh, Rust-right. Curtis- So, especially in close races and you never
Curtis	:15	:06	know what a close race is anymore because back before I wrote this
			code and it got put into machines, we always used exit polling. We
Attorney			use exit polling in foreign countries to judge whether their elections
Clint	00:47:36	00:47:50	are accurate.
Curtis	:08	:10	
			A year after the machines came out, the exit polls no longer ever
Attorney			matched. So our solution was to quit doing exit polls.
Clint	00:47:50	00:48:10	
Curtis	:13	:06	It wasn't we said, well, something's wrong. We need to investigate we
			will just quit using them. It's too confusing. And the results don't
Attorney			come out the same way we're told. So we just won't use. But in other
Clint	00:47:50	00:48:10	countries, we use them. And so that from a from that aspect, there's
Curtis	:13	:06	not a lot you can do. You know big make it proprietary software.
Attorney			Well, there are a lot of proprietary cases and law where you can still
Clint	00:48:10	00:48:30	look at what's going on. You're just basically do it in-camera and you
Curtis	:09	:00	know, you can sworn to secrecy. So nothing gets out. Here. You can't
			even look at it. Can't even look at it. Impossible. And now ballots are
Attorney			becoming that you aren't allowed to look at those ballots.
Clint	00:48:10	00:48:30	
Curtis	:09	:00	
			definitely aren't allowed to hand-count them like Florida
Attorney			?words??____something-- back door machines words??--already -
Clint	00:48:30	00:48:51	--do it. Why? they are trying to go to ballot images. They don't want
Curtis	:00	:15	anything, ?words??--install--anything you know, ? Words?- Intel or
			anything. So it's just crazy from and a judge's don't have a lot of room
Attorney			to work with it because they have to follow the law.
Clint	00:48:30	00:48:51	
Curtis	:00	:15	
			That's what they judge of the law. And basically the laws are written in
Attorney			order to finalize the election, not to determine the validity of it. You
Clint	00:48:51	00:49:15	have no time to actually get the discovery, words??--get things
Curtis	:15	:18	done--other than--- to actually do any investigation prior to
			certification. But once it's certified, it doesn't matter what you find.
Attorney			
Clint	00:49:15	00:49:17	
Curtis	:21	:24	But the question.
Attorney			
Bob Rust	00:49:17	00:49:19	go ahead Joe
Attorney			The, just real quick with the exit polling, definitely. ?words unclear:
Clint	00:49:19	00:49:39	Look at the Democrats when they come to Venezuela talking about.
Curtis	:09	:24	Yeah, the exit polling shows that, you know, Maduro did not win.
			Yeah, but here we don't do exit polling anymore. Yeah. It's funny how
Attorney			that works. My thing is, how can we help try to figure this out.
Clint	00:49:19	00:49:39	
Curtis	:09	:24	

Is a count going back to the precincts, we have to stay at the lowest common denominator. And when you got a precinct that is, predominantly Republican and predominantly Democrat, you should know how that precinct should end up. Maybe. And, but the ones that get close, those are the ones you can manipulate a little bit more because it's realistic to believe that some Democrats voted Republican and some Republican voted Democrat.

Attorney 00:49:39 00:50:03
Bob Rust :26 :27

And that's why that small percentage is that, you know why you lost by only 1% or something like that. So, so yeah, my question is if they can reprogram it, that they'll have to like do it only like in certain precincts or in certain areas where they know they can get away with their. Because, you know, why bother in Tennessee where you know, majority is Republican and it would be obvious that there's something going on, but they have to do it in areas.

Attorney 00:50:03 00:50:35
Bob Rust :27 :22

I would think that, you know, that it would be difficult to prove that, based on the statistics. So, is that what I mean? You think that they're gonna have to do it for it because, you know, we have 158 precincts here, that there's really no point for them to go into, you know, some areas of Allentown and mess with the machines.

Attorney 00:50:35 00:50:56
Bob Rust :22 :10

They're not voting Republican. And then same thing in some parts of, of the of the rural part of Pennsylvania. They are voting Republican, but do you think they're doing it just it's across the board. Is that just specific areas to specific precincts, and how can they do that?

Attorney 00:50:56 00:51:14
Bob Rust :10 :07

If you can think of it, I can make it happen. Yeah. So however they want to do it. But you know, but you go and you move those Republican votes presidential or Senate race. Those votes may be solid red, but if I move ten of them, you're never going to catch right in the deepest red places there are. I can move ten at a time.

Attorney 00:51:14 00:51:35
Clint :09 :25
Curtis

I can also invent ballots. We had, a lady down in Texas. She had a she's doing a precinct. They have electronic poll books down there. So, you know, anyway, electronic poll books, of course, are connected. They can read everything. They know what's going on. They can insert voters that don't actually exist, not even a problem. So down there and her, she was --unclear words---sitting there watching slow the rate the poll thing.-----

Attorney 00:51:35 00:52:01
Clint :28 :00
Curtis

She had like 120 people that came in the whole day. She was watching it. Suddenly her playbook number started going up, went up to 7000, which was actually more than people that could have. But it didn't matter because it's already on the polls. So now they have

Attorney 00:52:01 00:52:26
Clint :00 :20
Curtis

7000 voters, okay. Which 7000? Which of those are real? And which or not.

Attorney
Clint
Curtis

00:52:27
:20

00:52:52
:09

You don't know you do not know who actually came in. Right. But because poll book says who actually comes in. So they do in Texas because in some of those places they actually write the people's names down when they come in. So, you know, they then contested it to the secretary of State for if here we go, this is the people came in and my poll book went to 7000, and they said that was just an error.

Attorney
Clint
Curtis

00:52:52
:09

00:53:22
:02

Ignore it. Okay. So what happens next time? That's just an error. Ignore it. So if the numbers don't even have to match and they don't, then you know what's a problem. In fact, if you look at most places, you know they don't match 2016. You know, and this is an interesting thing because I go up there and I go, you think 2020 was a legitimate election?

Attorney
Clint
Curtis

00:53:22
:05

00:53:48
:21

There they no. Oh, right. In Republican areas. And they say, how about 2016? Well, sure. Well why it's the same. It's like when it were 2016, one of the worst elections we had in the entire world. We've been hacked. We don't know what's going on here. The election 2020 was described as the best election we've had in history.

Attorney
Clint
Curtis

00:53:48
:23

00:54:03
:22

Right. The guy came out a week later the guy who read only one line of code in his whole life comes out and says, that's the best election result in the whole time. What was the difference? The guy who ran Because you know. Right. Nothing else. Nothing once.

Attorney
Bob Rust

00:54:03
:25

00:54:23
:00

Yeah. It reminds me of the story about how history is written. It's written by the fact the people have won the victors. Let me just digress. A quick minute. you developed this algorithm? Why did you do it? And what happened with it.

Attorney
Clint
Curtis

00:54:23
:03

00:54:42
:23

Well, I'm a programmer, so I developed a new program. I was assuming that they didn't want that. There were some hint of an electronic voting machine coming in, and they wanted evidence that that wouldn't be a good idea. So I wrote that, and I wrote the paper with and said, okay, and this is why you don't use it, right?

Attorney
Bob Rust

00:54:43
:00

00:54:43
:24

Okay.

Attorney
Clint
Curtis

00:54:43
:27

00:55:05
:19

Or you go to a click here and here and you can make anybody you want flip. So Democrats winning and you want the Republican to win. I think it's the top left corner, the bottom left corner on a set. And it'll flip. Want the Republican to win on top right corner about. It'll flip

right and everything flips. So it flips the database flips and --unclear word-- the xxx flips.

Attorney
Clint
Curtis

00:55:05 00:55:38
:21 :04

So there's nothing you can look at in there. you can't say it flipped. Now you can't say it flipped see its perfect no matter which way it comes out. It's it. ----words unclear---so I gave it to them---But and so I wrote up so and the head of the company said no this isn't. And as a Republican that requested this, by the way, back in 2000, but, gave it to the head of the company and gave it to her, you know, and she said, well, this is not actually for stopping--words unclear--we plan on using it.---what happened after that I do not know because I do not roll things out-----

Attorney
Clint
Curtis

00:55:38 00:56:01
:04 :21

So after that, I don't know, because I don't roll things out I am a programmer So a lot of people say, well, well, was it used in the Diebold machines. Well, Diebold seemed to have some problem and they seem to be using a very identical programming systems that I wrote in my prototype. But can I say they used that, you know, how do you know that?

Attorney
Clint
Curtis

00:56:01 00:56:24
:23 :24

Because you don't know rolls it out programmers are never going to know that where they roll it out. In fact, they were still using the Gems database, which was in a production system. We're going to use a real database, correct. Like SQL Server or Oracle, something like that. I wrote it as a prototype, so I wrote it to talk to an MDB file, which is essentially, Microsoft Access.

Attorney
Clint
Curtis

00:56:24 00:56:49
:27 :10

That little simple program you get like throw in there. Ten years later, they were still using an access database called Gem until, you know, people got on it and said, why are you still using that why are you still using access the thing this guy said he wrote 20 years ago and you're still using it.today You know, today. So I'm not sure if they went to MySQL was wouldn't be a big step.

Attorney
Clint
Curtis

00:56:49 00:56:57
:10 :12

But why would you have an access database in any production system that you have now sold to the government?

Joe Vichot

00:56:57 00:57:10
:14 :18

So but first I'm going to have to sign off here pretty soon. Curtis--boredom --unclear words--

Attorney
Bob Rust

00:57:10 00:57:29
:20 :10

Voice initially muted--that maybe a good idea because I want to get rid of the background noise. You wrote that system because you wanted to demonstrate. Why not to use the machines that once it got into the hands of other folks, they, they started to use it for their own purposes. Democrat, Republican, whatever. Okay.

Attorney Clint Curtis	00:57:29 :12	00:57:47 :20	I was I told the Democrats right away that, you know, this Republican who was a congressman had actually requested this program. You would think the response would be, that's terrible. We need to do an investigation yada yada. the first thing out of each mouth, and she goes, why didn't we think of that first?
Attorney Bob Rust	00:57:47 :23	00:58:03 :26	Okay, well, listen, we're coming down to the, the hours almost over, Joe,. I'll give you a shot to ask, or say whatever you'd like to quickly say to Clint, and, and then I will close it up.
Joe Vichot	00:58:03 :28	00:58:28 :17	But, yeah, we're definitely in a tough spot right now. Nothing's going to get change before this election. And this is the, you know, like they say, the most historical election ever. So all I can ask is, what we're going to do is what Donald Trump is trying to get out is, you know, swamp the vote, you know, too big, too big to rig comments like that.
Joe Vichot	00:58:28 :19	00:58:52 :20	You know, kind of like you say, the very people think he's already going to win it. You have to have such an overwhelming number in order for us, you know, for them to maybe think that they are not going to get away with it. That's the only way I think we're going to get around that this year until we get people in, like you're talking about to change the entire system.
Joe Vichot	00:58:52 :23	00:59:11 :14	And. But every day I go out, every day I need people to be door knocking every day. I mean, people we sure are going out on the issues. We still need to make sure people know who they want to vote for and know what, and the ramifications of who are they voting for. And that's a big part of it.
Joe Vichot	00:59:11 :14	00:59:29 :11	So it's get out the vote and protect the vote. Obviously, the protected vote is the part that we're really worried about, but if the people don't get out the vote. It doesn't really matter. So I'm doing both and I have to sign off because that's what I'm going to go do right now. And the Hispanic community in Allentown. So I appreciate this podcast.
Joe Vichot	00:59:29 :11	00:59:35 :17	I appreciate meeting you clint and Bob, thanks again for all you do.
Attorney Bob Rust	00:59:35 :19	00:59:57 :18	Okay. Well, I understand why you have to leave, but listen, thank you very much. I'd like to know if you're up at some of the things you've said with our organization here, granted, we're local, we're small, but we want to become a part of the solution. And I can envision some things I'd like to follow up with you on later.
Attorney Bob Rust	00:59:57 :18	01:00:21 :19	I think, in terms of how we can pursue this legally as well as work legislatively and we've got a number of your video, which we certainly could talk about making available to Joe and others, other sources.

But I trust that we could continue to follow up on our dialog with you. Well, listen, you know, you let me commend you for all that you've done, your persistence.

Attorney	01:00:21	01:00:39	Obviously, you're brilliant. So much in your field. You've just done a great job. ?unclear words--- But that ball has been taken and used in ways that you didn't expect it to be. But that's what it is. And with that, I want to commend the to the rest of the people that listen to this. Pay attention what's been said.
Bob Rust	:19	:15	

Attorney	01:00:39	01:00:53	Help us make the change to get rid of these electronic machines, as our speaker tried to do many years ago. So with that, I will say, well, thanks to everyone and we will close this, this interview.
Bob Rust	:15	:19
